

RETORNA®

ANTI-AGING FACE CREAM

IMPROVES THE RESULTS OF ANTI-AGING TREATMENTS with botulinum neurotoxin (BoNT)

BoNT treatments offer fast and effective results but are limited in time.

The application of RETORNA® Facial Cream as a complement to the application of BoNT to reduce facial wrinkles has proven to be very effective since it improves the texture and firmness of the skin, moisturizing it and providing luminosity. In addition, it helps redefine the V-shaped facial oval and has tightening effect on the skin, giving it a younger appearance.

COSMETIC BOTOX EFFECT

RETORNA® Facial Cream contains Argireline®, a designer peptide that helps relax facial muscles and can help prevent the formation of chronological wrinkles and expression lines. Its anti-wrinkle effect is combined with the stimulation of the production of collagen fibers, which helps to lift and firm the corners of the lips.

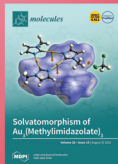

LIFTING EFFECT

The hyaluronic acid present in RETORNA® Facial Cream gives it highly hydrating, moisturizing and softening properties, maintaining the smoothness of the skin, firming and smoothing expression lines.

The combined use of BoNT and RETORNA Facial Cream

- Get a greater reduction of wrinkles.
- The results remain over time even after 6 months, which is the recommended time between facial injection sessions.
- Does not contain parabens and is suitable for all skin types including sensitive.
