

Alzer[®]

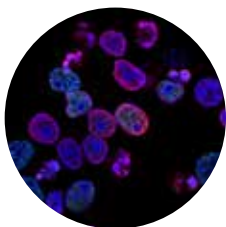

Helps regulate oxidative damage and inflammation in the nervous system.

Properties

Ginkgo biloba extract

Helps prevent the onset of thrombosis. Helps modulate neurotransmitters and control oxidative damage at the nerve level.

Lipoic acid

Helps control oxidative damage caused by oxygen free radicals and reactive nitrogen species that interfere with endothelial function.

L-carnitine

Reduces oxidative stress and helps reduce inflammation and damage at the cellular level.

Alfalfa

Helps improve memory, mood and cognitive system in ageing.

Presentation

Capsules of 658 mg in packs of 30 and 90 units.

Instructions for use

One capsule thirty minutes before each of three main meals.

Treatment should be maintained for at least six months.

This material is for professional use only.

All the components used in the formulation of Catalysis products have natural and water-soluble properties, so they can be administered for longer periods of time and are suitable for use as an adjuvant to other treatments.
