

Oxidative stress

damages the cells, causing premature aging and disease

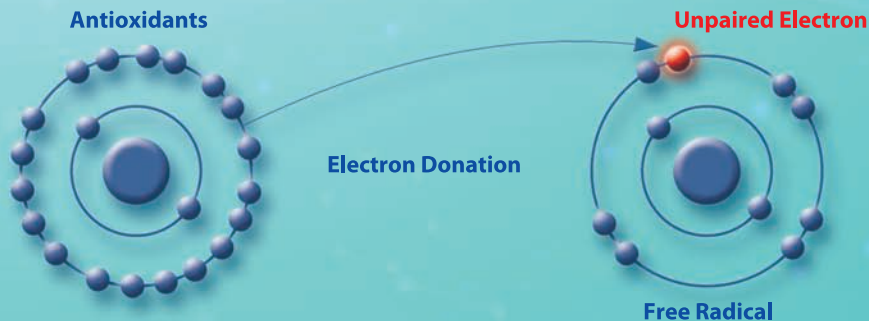

Our products are formulated with the benefit of activated molecules.

1. Increased biological activity
2. Lower concentrations of active ingredients required
3. Synergistic effects of antioxidants
4. Fast action
5. No side effects

Activated antioxidant therapy neutralizes free radicals

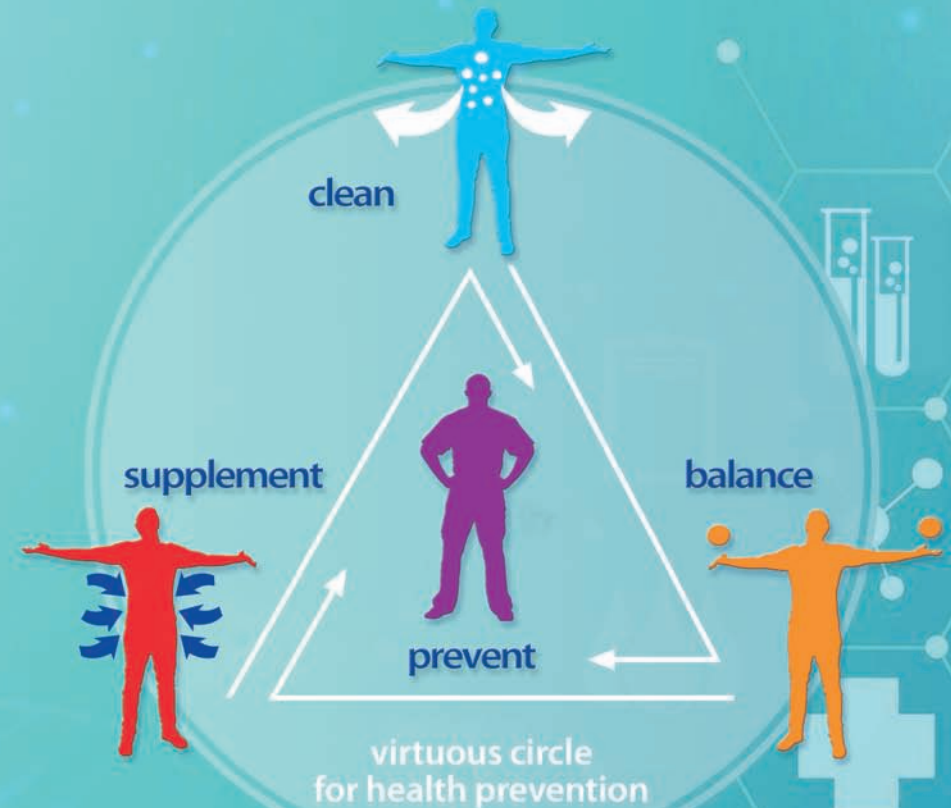

The **MOLECULAR ACTIVATION** of a formula to be activated consists of passing it through a magnetic field in a reactor that increases the antioxidant capacity of its molecules, that is, it gives them greater power to block free radicals, which are responsible for damaging first the cells, then the tissues and finally the whole organism, causing illnesses due to the collapse of the immune system.

The supply of nutrients with antioxidant properties is essential for the optimal functioning of cell metabolism and to prevent infectious, parasitic and degenerative diseases.

MOLECULAR ACTIVATION considerably improves the biological activity and biochemical reactivity of all antioxidant molecules.

PRODUCTS

that cleanse, balance and supplement the body for prevention and health care

- ASBRIP®
- CARMINAL®
- DEPREXIL®
- DIAMEL®
- KARDIOLI®
- FOLREX®
- OBEX®
- OCOXIN®
- RENALOF®
- VIUSID®

DEPREXIL®

activated ginkgo biloba, selenium, lipoic acid and L-carnitine

helps maintain memory and contributes
to good cognitive skills

DEPREXIL® is formulated with natural antioxidants with proven efficacy in regulating neuronal functions.

Reactive oxygen metabolites cause rapid neuronal degeneration, mainly affecting neurotransmitters and accelerating neuronal death. However, antioxidant compounds have beneficial effects in patients with neurodegenerative diseases.

Due to its natural and specific antioxidant content, **DEPREXIL®** acts effectively to prevent the degeneration of neuronal membranes due to oxidative stress, affecting their functionality and viability.

The **ginkgo biloba** present in **DEPREXIL®** is a powerful antioxidant that neutralises free radicals that can damage nerve cells, increasing the amount of oxygen available to the brain and preventing vascular disorders.

Selenium, lipoic acid and L-carnitine have been shown to be effective as neuroprotectants in age-related dementias.

improves
neuronal metabolism

Taking 1 drinkable vial per day of **DEPREXIL®** delays the onset of age-related cognitive disorders and prevents depression.

• Oral Solution
