Dual-action Strategy for Severe Acne: **DIAMEL - GRANEX**

Evidence-based recommendations for severe acne

Recommended Protocol

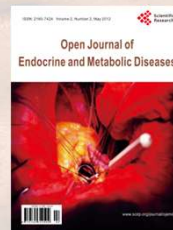

DIAMEL: 1 capsule, 3 times/day,
before main meals

GRANEX: Apply 2 times a day (morning and evening)

Advanced Clinical Micronutrition in Severe Acne care

It acts from the systemic metabolism, regulating the hormonal and metabolic basis of severe acne. It improves insulin sensitivity, reduces sebaceous production and exerts antioxidant and anti-inflammatory action that limits the inflammatory cascade and cell damage.

Acts directly on the skin by reducing Cutibacterium acnes, decreasing inflammation of lesions and clearing blocked follicles. Its keratolytic and antimicrobial action reduces comedones and pustules, accelerating the resolution of acne outbreaks.

Backed by scientific and clinical studies
