

Insulin resistance

It is a condition in which the cells of the body do not response properly to insulin, a key hormone for blood glucose control. This metabolic dysfunction is one of the main causes of the development of diseases such as **type 2 diabetes**, **Polycystic Ovary Syndrome (PCOS)** and **Metabolic Syndrome (MS)**. These conditions affect millions of people around the world and are closely associated with modern lifestyle, oxidative stress and chronic inflammation.

DIAMEL PLUS® is a food supplement designed to **support glucose metabolism** and **improve insulin sensitivity**. Its advanced formula combines plant extracts, antioxidants, and micronutrients that works synergically to promote metabolic balance and general health.

Molecular Activation Technology

Committed to health since 1997, through innovation and effective solutions scientifically backed.

Molecular Activation Technology is necessary and essential to increase biological activity, thereby obtaining maximum effectiveness in the treatment of diseases that produce free radicals, either directly or indirectly.

DIAMEL PLUS

Controls your glucose naturally

Exclusive use for healthcare professionals

DIAMEL PLUS®

A complete formula with antioxidants, minerals and plant extracts that contributes to metabolic balance and overall well-being.

Comprehensive support for glucose metabolism

-  **Improves insulin sensitivity** and helps control blood glucose, with proven efficacy in clinical studies.
-  **Reduces oxidative stress**, unlocking insulin receptors, thereby reducing hyperinsulinemia and supporting cardiovascular health, thanks to its comprehensive formula of antioxidants, minerals, and plant extracts.
-  **Enhances pancreatic function**, contributing to a healthy metabolism of glucose
-  **Safety guaranteed**, with no known side effects.
-  **Versatility** for people with insulin resistance, diabetes type II, Polycystic Ovary Syndrome (PCOS) and methabolic syndrome (MS).

Instructions for use

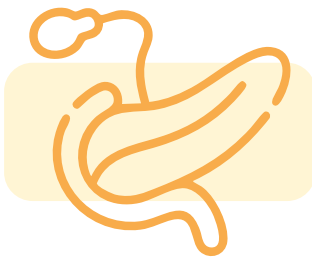

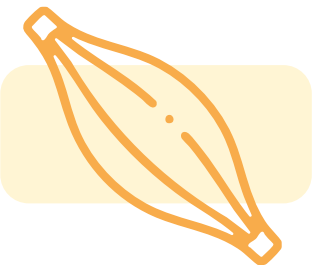

Dose	Warnings
2 capsules every 8 hours, 20 minutes before meals.	Do not use as a substitute for a balanced diet.

Mechanism of action

DIAMEL PLUS® works comprehensively on the main organs and tissues involved in glucose methabolism.

Pancreas

Enhances pancreatic function and boosts insulin secretion thanks to ingredients such as *gymnema* and *chromium picolinate*, helping to improve the glycaemic response.

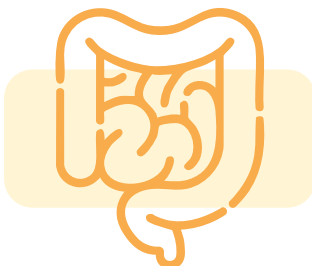

Muscle

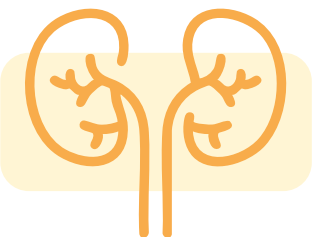

Its complete formula improves glucose uptake in muscle tissue, by *increasing insulin sensitivity*, unlocking insulin receptors.

Gut

Reduces intestinal absorption of glucose thanks to compounds such as *gymnema leaf extract* and *alfalfa*, which contributes to prevent postprandial glycaemic spikes.

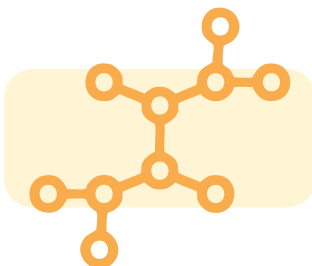

Kidney

Contributes to kidney protection against oxidative damage through antioxidants such as *vitamin C* and *zinc*, helping to preserve kidney function in people with methabolic disorders.

Systemic action

Regulates energy and hormonal metabolism through nutrients such as *potassium iodide* and *vitamin D3*, promoting a general metabolic balance.

Ingredients

Cranberry extract
Improves insulin sensitivity.

Alfalfa extract
Reduces postprandial blood glucose.

L-Carnitine L-Tartrate
Fatty acid metabolism.

L-Arginine
Nitric oxide production.

Cinnamon Extract
Glucose uptake.

Vitamin C and Zinc
Powerful antioxidants.

Gymnema leaf extract
Reduces absorption of intestinal glucose and improves insulin sensitivity.

Chromium picolinate
Improves insulin sensitivity and regulates blood glucose levels.

Potassium iodide
Essential for thyroid hormone synthesis, improving glucose metabolism.

Vitamin D3
Reduces inflammation and improves insulin sensitivity.
